

## Leica Captivate: Exporting text/ASCII data

<p>1</p>		<p>Here is the job I am going to export. It consists of two closed strings surveyed in order to obtain the area of a road and roundabout that needs to be resurfaced.</p> <p>This guide will first look at how to export a list of coordinates in the form of a CSV so that the area may be double checked in Excel.</p> <p><b>Tap</b> the job you wish to export.</p>
<p>2</p>		<p>This list of options will open.</p> <p>Select <b>Export data</b>.</p> <p>You can use either the touchscreen or the Up/Down arrow buttons and then the Enter key.</p>
<p>3</p>		<p>Select the <b>ASCII</b> option.</p>

<p>4</p>		<p>This is how my CS20 defaults. I need to change a few things here. I will need to alter where the file is exported to and the file extension.</p> <p>The first thing I need to do is edit what is exported. Look at the Example line. I want to add a Code to the export.</p> <p>Press the <b>Fn</b> key and then press the <b>F1</b> key or tap <b>Settings</b>.</p>
<p>5</p>		<p>With this screen you can edit just about anything. You can change the Delimiter if you do not want a true CSV file. You can change the coordinate order should you need to.</p> <p>I want the Code for each point to appear on the export. Highlight the required line and either press <b>Enter</b> to access the list or scroll through left or right until...</p>
<p>6</p>		<p>.... You find what you need.</p> <p>Press <b>F1</b> or tap <b>OK</b> to accept the edits.</p>
<p>7</p>		<p>Back to this previous screen. I have made the changes. I am exporting to the USB.</p> <p>I have also changed the file extension from .TXT to .CSV which will mean my file opens in Excel rather than Notepad as default.</p> <p>Press <b>F1</b> or tap <b>OK</b> and the file will be exported.</p>
